

2-DRAWER MIXED BANKNOTE VALUE COUNTER DP-8120

The new DP-8120 mixed banknote sorter introduces a new system to process banknotes, saving time and improving productivity in environments where large amounts of money are handled, such as banks, security transport companies, supermarkets, etc. The device can manage mixed denominations up to the speed of 1,500 banknotes per minute, providing on the display, even for the USD currency, a report complete with: number of pieces counted and verified correctly, value of each denomination and total value. The innovative two-drawer collection system allows you to:

- Select, by inserting a bundle of mixed banknotes, all the banknotes of a single denomination. All the others flow into the “reject” drawer, without interrupting the count.
- Test and orient the banknotes of a single denomination
- Count and check a large number of banknotes without any interruptions in the case of banknotes considered suspicious: the banknotes counted and checked correctly flow into the first drawer; those not recognized or suspected of being false are diverted to the “reject” drawer, without any interruption of the process when a banknote is deemed suspicious.

By selecting the SERIAL function, the serial number of the banknotes is shown on the display.

Technical specifications

Fake Verification Methods	2 CIS, UV, MGD, MT, IR
Batch setup	Free count or from 5 to 199 with keypad
Detectable errors	Chained banknote, half, jam
Net weight	9 KG
Dimensions	247mm x 26mm x 260 mm
Counting speed	800/1.200/1.500
Functions	Mixed or single denomination billing
	Free count / Face / Orientation
Currencies	EURO, GBP, CHF, USD
Loading capacity	500 banknotes
Reject drawer capacity	100 banknotes
Collection capacity	200 banknotes
Data transfer and updating	By card SD
Display	128x64 LCD
Power / Consumption	230v, 50Hz / <60 W
Room temperature	0~40°C
Humidity	20~85%
Noisiness	Not more than 60dB
Interface (optional)	RS-232, USB, SD CARD, RJ45 LAN
